ABSTRACT:

PROBLEM TO BE SOLVED: To obtain a cosmetic excellent in stability and humectant properties by using a plant extract abundantly containing L-ascorbic acid by including a fruit extract of CAMU CAMU (botanical name: Myrciaria dubia).

SOLUTION: This cosmetic is obtained by including a fruit extract of CAMU CAMU which is a fruit tree of the genus Myrciaria. A juice prepared by carrying out a pressing treatment of the juice from the fruit, a liquid part separated from a pulverized material, a ground material or a crushed material of the fruit by filtration or decantation, an extract of the fruit (the pulverized, ground or crushed material) with water and/or an organic solvent, a precise filtrate by ultrafiltration or the like, a treated-material (a concentrated or a diluted material) and the like are cited as the fruit extract of the CAMU CAMU. The resultant juice, liquid part, extract, precise filtrate, treated material and the like, as necessary, can suitably be combined. When carrying out the ultrafiltration treatment, a polymeric component having
